CASCADE

Put data in its place

revera
CLOUD SERVICES PROVIDER | A Spark New Zealand Company

> **Support mixed workloads at petabyte scale – Cascade's smart object storage makes it quick and easy.**

Manage mountains of unstructured data the easy way – in one system

Cascade is purpose-built to store, archive, and access unstructured data for fluid movement across private and public cloud infrastructure.

Forget about traditional storage systems, such as NAS. With Cascade, your data is available on demand, anytime, anywhere.

Make manual storage provisioning history

Cascade's intelligent policy-based management lets you organise, preserve, and govern vast data repositories – on your terms – to react faster to change and reduce costs.

Save a bundle. Cascade lets you eliminate backups and switch data to more cost-efficient tiers of storage.

Build a scalable, adaptive storage solution

Manage data growth efficiently; centralise management; rebuild large data sets fast and efficiently; optimise storage with automated compression; eliminate backups with integrity checks, replication and erasure coding.

Meet business and compliance goals

Create policies to automatically move content to approved storage platforms and tiers; reduce costs by shrinking backup and recovery times; manage data retention and legal hold and data disposition; preserve immutable, undeletable WORM storage for guaranteed authenticity or proving chain of custody.

Future-proof your storage

Manage existing and emerging application and user data with a single, multitenant solution; deliver data sharing anytime, anywhere, on any device; access multiple public cloud services; manage data in the cloud with REST, S3, or Swift technologies, including Revera Vault, Amazon S3 and Microsoft Azure Blob storage.
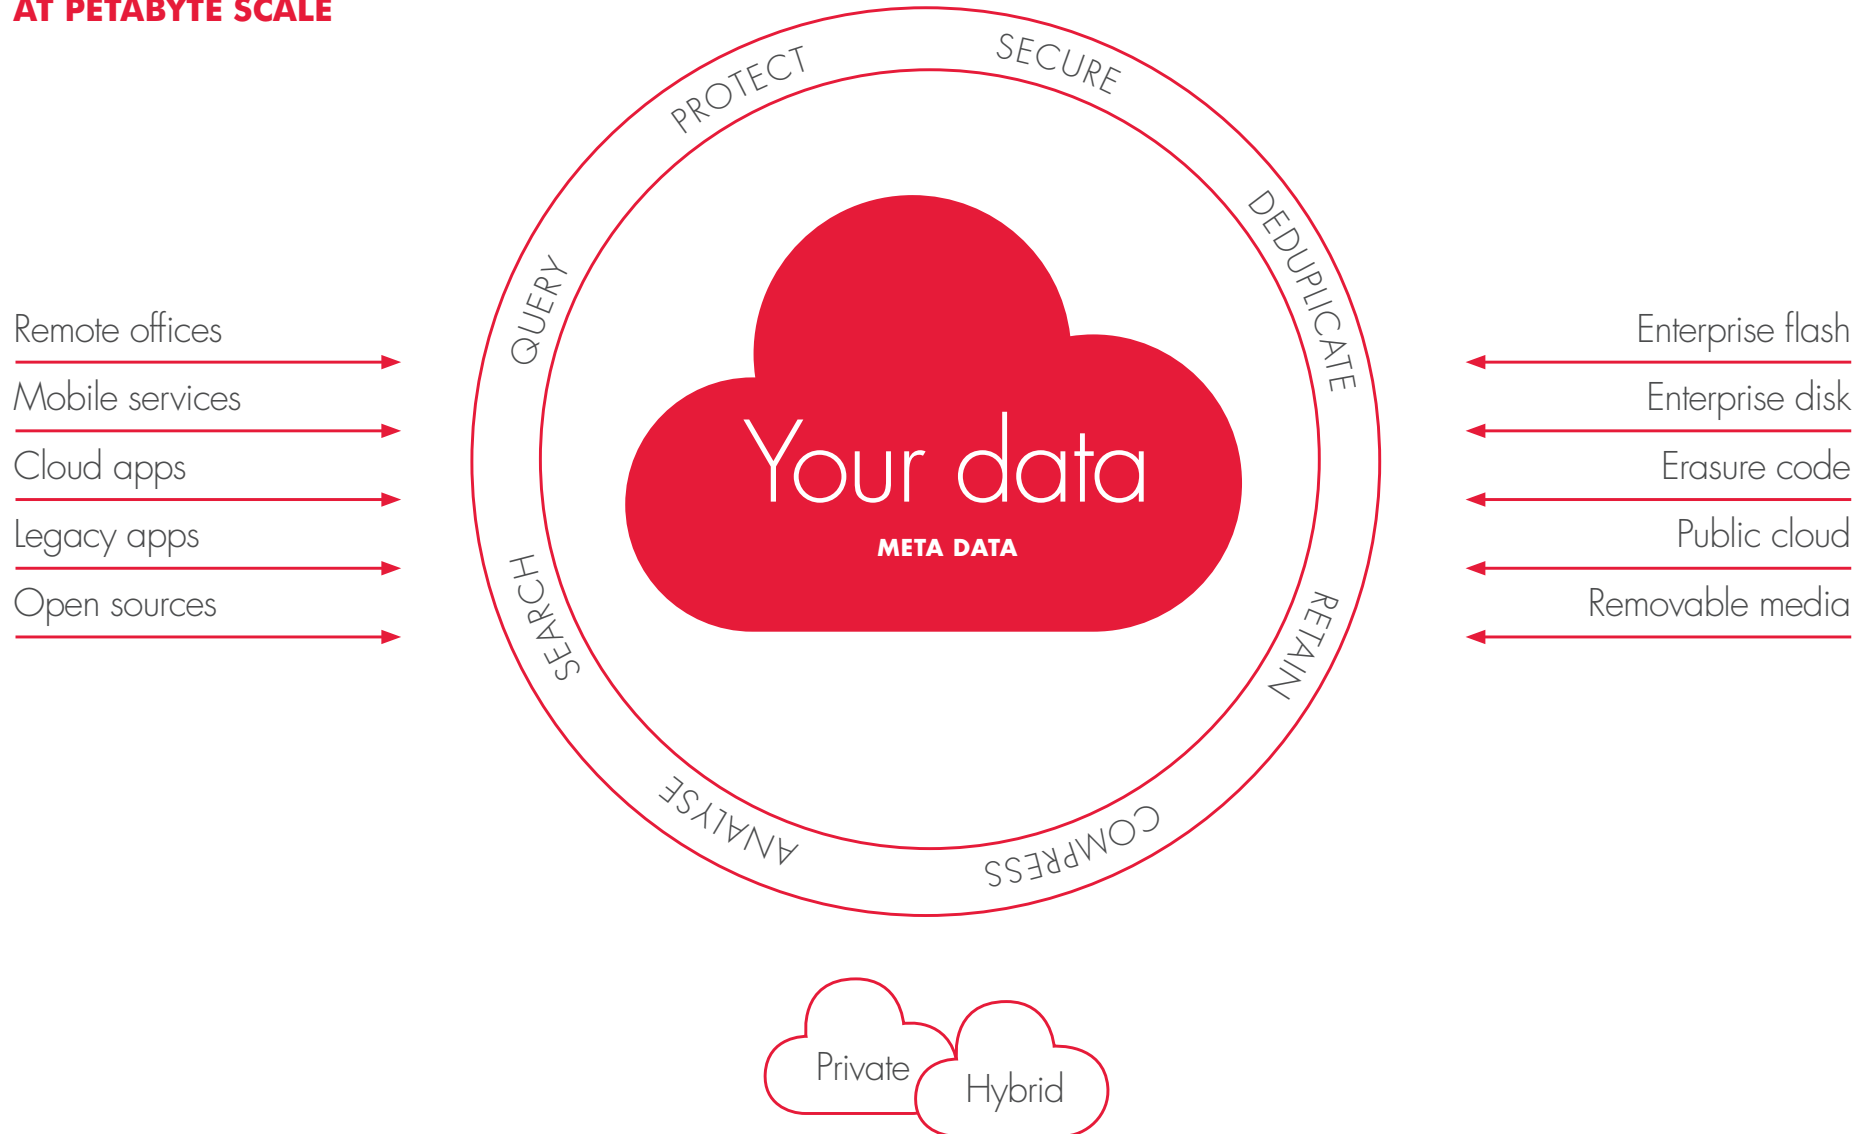

Stay protected – always

Cascade keeps your data safe and available, offering 99.99% data availability.
