

Accelerating Cloud Maturity

A seamless cloud journey
enabling agility, constant
resilience, the ability to
optimise costs, and confident
compliance

Today, organisations face challenging times, under constant pressure to digitally transform, innovate and adapt at pace. At Fujitsu, we work with businesses of all sizes from across all industry sectors, helping them to achieve their transformation goals.

As society is rapidly becoming ever more connected. Every aspect of our lives – from work to leisure, family life to health and wellbeing, commerce to sustainable development – depends on the digital connectivity of people, things, places, and organizations. That, in turn, all depends on digital infrastructure. Great technologies, seamlessly connected and securely operated by a trusted partner so that everything works efficiently. And that can evolve at the pace of social and technological change in

dynamic markets and societies. Fujitsu is committed to providing a digital infrastructure that is secure and seamless for everyone who depends on it.

Our Fujitsu Cloud Managed Services are a suite of services which reduce the complexity of managing your cloud infrastructure efficiently. They give you the freedom to empower talent within your business and provide great fulfilling experiences to your customers. They also enable you to drive sustainability, assure governance, and offer strong resilience while realising business value at each step of your transformation journey.

Our Fujitsu Springboard™ for Azure provides an accelerated approach to cloud adoption, management, and governance, helping customers to navigate through the complexity. By introducing modern, state-of-the-art practices, that enable businesses to rapidly harness the full power of Microsoft Azure.

Fujitsu offers our solutions backed by four key pillars

Agility

Constant resilience

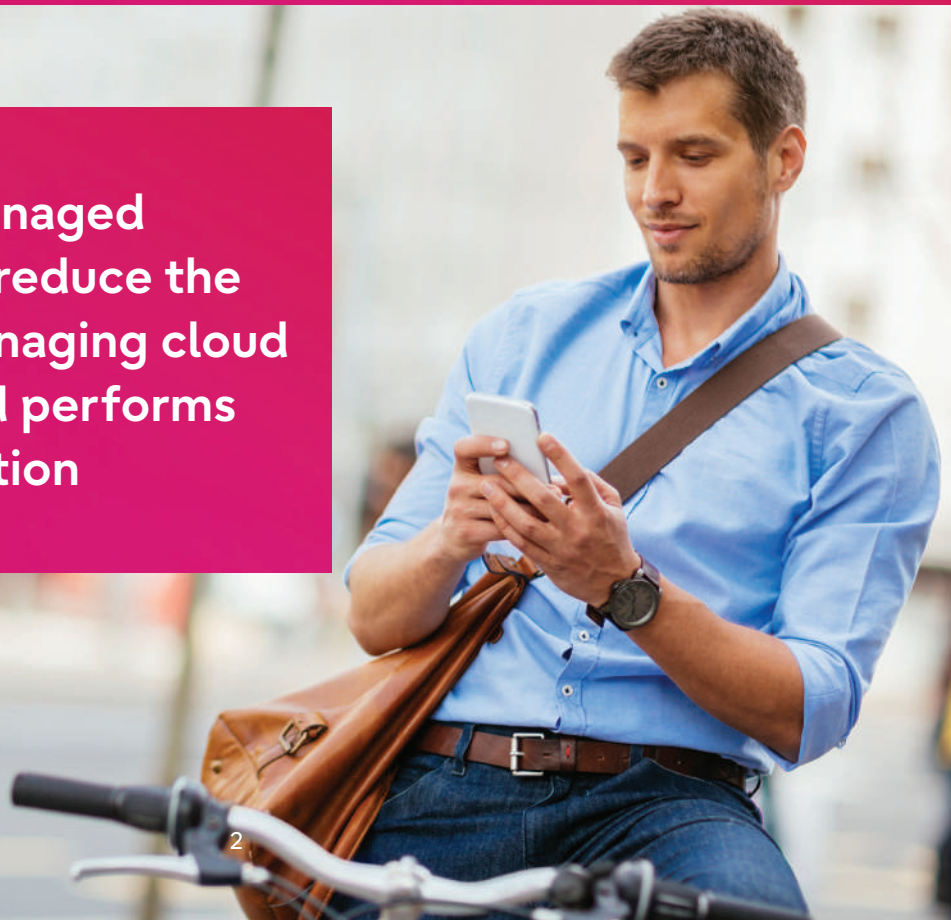

Ability to optimise costs

Confident compliance

Fujitsu's Cloud Managed Service offers to reduce the complexity of managing cloud infrastructure and performs ongoing optimisation

Fujitsu Cloud Managed Service powered by Fujitsu Springboard

The Fujitsu Cloud Managed Service is powered by Fujitsu Springboard to automate your digital infrastructure platform. For true value, Fujitsu's Cloud Managed Services are designed to be empowering.

We deliver the enhanced agility you need to drive and manage rapid change so that you can thrive in a world of change and constant disruption. Because we offer a global cloud-native managed service you get end-to-end support for your cloud environment.

Our experts provide a seamless and secure service that helps you deliver increased value from great customer experiences founded on underlying cloud management that's based on industry-leading DevOps automation.

These are some of the benefits gained:

Automated compliance reporting

Your security teams gain comprehensive compliance visibility across deployed cloud assets, with automated monthly reporting.

Automated compliance remediation

Take immediate actions to self-heal compliance breaches with automated remediation.

Automated infrastructure as code

Achieve an automated immutable definition of all deployed cloud assets, with an automated synchronisation to your IaC git repository.

Empowered Self Service

Empower your teams to achieve automated deployment and adjustment of cloud resources, either via pipelines or a cloud catalogue.

Automated Patch Management

Achieve Essential 8 compliance with automated patch management execution with self-healing built in.

Automated Backup Management

Protect your business data with automated cloud backup and recovery.

Automated Asset Management

Ensure your CMDB is continually updated with automated asset discovery.

The Springboard™

Fujitsu Springboard™ for Azure is the solid framework to accelerate your business towards agile practices and an adaptive cloud platform in Microsoft Azure. The framework is engineered to seamlessly combine the design and deployment of your Landing Zone in Azure.

The Springboard™ for Azure consulting engagement tackles the eight core areas of design in the Microsoft Cloud Adoption Framework, ensuring the solution answers the requirements from all parts of your business. The process utilizes Agile and DevOps and is highly collaborative, fully transparent and lightning-fast.

Working together in partnership, we help you to co-create a secure, enterprise-grade Azure foundation

tailored to your specific needs. The outcome is a fully functional immutable infrastructure Landing Zone in Azure, conforming to and incorporating best practice from the Microsoft Cloud Adoption Framework and Enterprise Scale Landing Zone guidance. And because of this alignment, it's guaranteed that the resulting Landing Zone will qualify for Microsoft deployment funding, further reducing the investment you need to make.

Innovate Faster

Develop new solutions faster with quality IaC library and Landing Zone templates.

Save Costs

Save both money and time - your Landing Zone up and running in days instead of months.

Create Value

Focus effort on your business challenge instead of foundation code and maintenance.

Build Your Future

Co-create your solution together with Fujitsu Azure experts and Springboard.

What is Fujitsu Springboard™ for Azure and how does it work?

Springboard™ for Azure arms you with the flexibility to easily scale, grow or pivot as your business and industry requires.

It's specifically developed to accelerate business transformation by fully utilising the programmability of cloud platforms and introducing DevOps practices. Infrastructure-as-Code (IaC), DevOps and Agile are at its heart, which means you get an adaptive IT infrastructure. With Fujitsu Springboard™ for Azure, you receive the code and blueprints to deploy Azure services and Enterprise Scale Landing-Zones. Your perpetual license to the assets guarantees you can continue to build your business on the Springboard code-base by yourself or with any third party.

Fujitsu Springboard™ for Azure offers an everything-as-code solution

Blueprints as code

Blueprints combining hundreds of blocks of code and configurations into commonly used Azure Landing Zones.

Infrastructure as code

Extensive library of pre-built, tested and validated quality IaC templates developed in Azure Resource Manager (ARM).

Configuration as code

Code for using Desired State Configuration for centralised management of Virtual Machine configurations.

Pipeline as code

Releases pipelines, triggers, jobs and steps for continuous deployment of Springboard™ assets into your Azure subscriptions.

Springboard™ for Azure is delivered using Agile and DevOps to ensure adoption happens at speed. With Springboard™ for Azure we provide:

Springboard™ Artefacts

A collection of Infrastructure as Code components, landing zone blueprints, design templates, and a pre-defined backlog of tasks.

Springboard™ Project Engagement

Well-defined professional services engagement to rapidly produce your customised landing zone as code - documented, tested, and ready to deploy.

Springboard™ Support Services

Ongoing support and updates to the Springboard™ code library when things change in Azure.

Fujitsu as your Azure Migration and Modernisation Program (AMMP) partner

The Azure Migration and Modernisation Program is Microsoft's offering for customers wanting to adopt the cloud. It's a single program that pulls together all aspects of support that an organisation will need to succeed in its cloud adoption.

Microsoft only trusts best-selected and verified partners to deliver AMMP to its customers, and at Fujitsu, we're recognized by Microsoft and Gartner as an industry-leading cloud services provider.

With us, as your Azure Migration and Modernisation Program (AMMP) partner, you are assured that you're working with one of the most trusted global Azure services providers and a world-leading digital transformation partner, with decades of Microsoft expertise and proven excellence in delivering enterprise cloud transformations.

A significant element of AMMP is the funding end customers receive to subsidise the investment of moving to the cloud. Fujitsu uses Springboard™ for Azure in AMMP deliveries to minimize the cost and ensure maximum AMMP fund payout.

Find out more

Next steps to build on your Springboard™ deployment

Once Fujitsu Springboard™ for Azure is deployed and the pipeline has run, we don't just set you adrift to manage on your own. We remain firmly by your side, helping you to further capitalise on your Azure investment using a wide range of expert add-on services, including:

- User support and updates to the Springboard™ codebase
- Managed services for baseline and platform operations –

- aligned to the Microsoft Cloud Adoption Framework
- Managed services for specialised platforms and workloads – aligned to the Microsoft Cloud Adoption Framework
- Professional services aligned to Microsoft programs (assessments, workshops, jumpstarts, AMMP)
- Professional services for deploying specialised platforms and workloads on Azure, like SAP and Citrix, for example.

Digital Transformation with Fujitsu and Microsoft equals... shaping a sustainable future

Success requires balance across products, services and solutions to solve your complex business and social challenges through digital transformation. With Microsoft, and technology across edge-core-cloud, we deliver secure, end to end solutions that drive your sustainable business transformation.

- High-level thinking combined with detailed implementation
- Human centricity that enables real business outcomes
- Merging of the digital and physical worlds
- Global reach with a local touch
- Broad technology skills, with deep industry expertise

Working together, we can transform your legacy estate and activate your Microsoft investment to deliver continuous value through the latest methodologies - including Fujitsu Human-Centric Design (HXD).

Discover how Fujitsu and Microsoft are transforming the future for customers around the globe.

Customer story

Invenco accelerating Azure adoption with Fujitsu.

Invenco wanted to migrate from an on-premises data centre to Microsoft Azure but lacked the internal expertise. They engaged Fujitsu and its Azure Centre of Excellence to define a roadmap and actions to ensure success. This included Fujitsu's Azure Adoption Accelerator, which explores the stakeholder ecosystem, creates a vision statement based on Invenco's drivers, and provides a broader vision of the outcomes, enabling a successful and seamless migration.
